

Baltimore County's

MD Green Schools and Green Centers 1999 to 2010

Recognizing site-based integrated environmental education in the classroom, in the schoolyard, and in the community

- MD Green Schools use the environment as a context for learning in all subject areas
- Students investigate environmental issues and take action
- Professional development supports high quality inquiry-based teaching
- Schools and centers model best environmental practices:
 - Energy conservation
 - Water conservation and pollution prevention
 - Solid waste reduction
 - Habitat restoration
 - Structures for outdoor learning
 - Responsible transportation
 - Healthy school environment
- Schools partner with the community
- Schools celebrate accomplishments

A MD Green School recognition benefits learning! There is a positive, statistically significant relationship between reading and math scores on standardized tests and a MD Green School designation
