

SOURCE OF SUPPLY

DEPARTMENT OF PUBLIC WORKS
DIVISION OF CONSTRUCTION CONTRACTS ADMINISTRATION
TOWSON, MARYLAND 21204

Updated August 2015

BALTIMORE COUNTY DEPARTMENT OF PUBLIC WORKS
DIVISION OF CONSTRUCTION CONTRACTS ADMINISTRATION

The Approved Source of Supply list will be published with additions, changes and deletions as needed. The Division of Construction Contracts Administration (410-887-3531) is responsible for monitoring the materials supplied and is empowered to disapprove suppliers on this list at any time. New sources of supply may be approved by DCCA as necessary, and may be placed on the next published list. Materials must be made by approved manufacturers. They may be supplied by either approved manufacturers or approved suppliers. Use of this list must conform to the following General Provisions in the Standard Specification For Construction & Materials:

GP 6.01 – Control of Materials

To expedite the approval of this notice, a list of Approved Sources of Supply is available through the Division of Construction Contracts Administration. If all materials are to be supplied from the sources on this list, only written notification to the effect is required. If other sources are to be used, they shall be submitted for approval. It shall be the Contractor's responsibility to insure that all materials are supplied from approved sources. Once the source of concrete or bituminous concrete for exposed final surfaces has been selected, that source is to provide material for all construction of continuous surfaces on the entire project. Submittal of all sources of supply will still be required for projects involving State and Federal funding. The engineer will inform the contractor as to source acceptability as soon as possible.

This current Approved Source of Supply list consists of 17 pages. Note that:

1. All types of pipe are grouped under the pipe category;
2. Waterline and Appurtenances section has been added specifically for waterline construction;
3. Portland Cement Concrete suppliers and bituminous concrete suppliers must maintain an approved mix design with the Division of Construction Contracts Administration;
4. Any change of plant or mix for bituminous concrete or Portland Cement Concrete surface course for a paving project or Portland Cement Concrete for exposed surfaces is not allowed without the specific approval of the Division of Construction Contracts Administration;

Please report any errors or inconsistencies in this list to Mr. John Koneyak of the Division of Construction Contracts Administration at 410-887-8729. Any deficiencies with the listed suppliers, knowledge that a given source no longer supplies the material listed, or other similar comments may be directed to him. This current list consists of suppliers approved previously by the Division. It does not include other suppliers being approved on an individual job basis or from being added to this list of approved sources.

Questions regarding sources of supply for specific projects may be directed to the program manager for that project at 410-887-3531.
